

What is claimed is:

1. A garment for a person comprising:
a garment body portion that substantially covers a torso of the person;
a hood attached to the garment body portion; and
a rollable head-and-face cover attached to one of the garment body portion
and the hood, such that the hood is external to the head-and-face
cover, wherein the head-and-face cover resiliently engages a head
and face of the person when the head-and-face cover is in a
deployed position.
2. The garment of claim 1 wherein, when the head-and-face cover is
deployed and the hood is in an up position, the hood is positioned over a top and
back of the head-and-face cover to form an insulating air layer about the head of
the person between the head-and-face cover and the hood.
3. The garment of claim 1 wherein the head-and-face cover operates
independently from the hood, so that:
 - (A) the head-and-face cover may be deployed or not deployed
irrespective of the position of the hood; and
 - (B) the hood may be positioned in the up or down position irrespective
of the deployment or non-deployment of the head-and-face
cover.

4. The garment of claim 1 further comprising:
a collar; and
a storage structure attached to the garment near the collar such that the
head-and-face cover is rolled and crumpled into a compact mass
for insertion into the storage structure for compact storage of the
head-and-face cover when the head-and-face cover is not in the
deployed position .
5. The garment of claim 4 wherein the storage structure has a fastener to
further secure the head-and-face cover in the storage structure.
6. The garment of claim 4 wherein the storage structure is a pocket located in
the hood, wherein the pocket is a piece of material attached to the garment body portion
along sides and a bottom of the pocket, the pocket having an open top to receive the
head-and-face cover.
7. The garment of claim 4 wherein the storage structure is a pouch suspended
from the collar portion by a connecting piece, wherein the pouch is a fragment of
resiliently expandable material sewn to the head-and-face cover along a periphery of the
pouch, and wherein the pouch is invertible so that when the head-and-face cover is rolled
and pushed against the pouch, the fragment of material turns inside out to enclose the
head-and-face cover.

8. A garment for a person, the garment comprising:
a body portion to substantially cover a torso of the person;
a collar located near the top of the body portion, the collar generally extending
around the neck of the person;
a unitary head-and-face cover to substantially cover and resiliently engage a head
and face of the person to shield the head and face from wind, thereby
impeding heat convection from the head and the face of the person, the
head-and-face cover being in a deployed position when the head-and-face
cover is covering the head and face of the person; and
a storage structure attached to the garment near the collar such that the head-and-
face cover is rolled and crumpled into a compact mass for insertion into
the storage structure for compact storage of the head-and-face cover when
the head-and-face cover is not in the deployed position .

9. The garment of claim 8 wherein the storage structure is a pouch suspended
from the garment body portion near the collar by a connecting piece, wherein the
pouch is a fragment of resiliently expandable material sewn to the head-and-face
cover along a periphery of the fragment of material, and wherein the pouch is
invertible so that when the head-and-face cover is rolled and crumpled into a
compact mass and pushed against the fragment of material, the fragment of
material turns inside out to form the pouch and enclose the head-and-face cover.

10. The garment of claim 9 wherein the connecting piece is attached to the pouch and the collar via stitching.
11. The assembly of claim 8 wherein at least one of the garment, the storage structure and the head-and-face cover is water impermeable.
12. The assembly of claim 8 wherein the head-and-face cover is constructed from an elastic material that resiliently engages the head and face of the person when the head-and face cover is deployed..
13. The garment of claim 9 wherein the pouch is attached to a back portion of the body portion circumferential to the collar.
14. The garment of claim 8 wherein the storage structure is a pocket wherein the pocket is a piece of material attached to one of the garment body portion and the hood along sides and a bottom of the pocket, the pocket having an open top to receive the head-and-face cover.
15. The garment of claim 14 wherein the pocket is attached to a back portion of the body portion.
16. The garment of claim 8 further comprising a hood with a drawstring to secure the hood by tying the drawstring around a chin of the person.

17. A garment for a person, comprising:
a garment body portion that substantially covers a torso of the person;
a hood attached to the garment body portion, wherein the hood covers a back and a top of a head of the person when the hood is in the up position and wherein the hood dangles behind an upper back of the person when the hood is in the down position; and
a ski mask attached to one of the garment body portion and the hood, such that the hood is external to the ski mask, wherein the ski mask resiliently engages a head and face of the person when the ski mask is in a deployed position, and wherein the ski mask is rollable in a direction substantially parallel to a spine of the person.

18. The garment of claim 17 further comprising a pouch suspended from the body portion by a connecting piece, wherein the pouch is a fragment of resiliently expandable material sewn to the ski mask along a periphery of the fragment of material, and wherein the pouch is invertible so that when the ski mask is rolled and crumpled into a compact mass and pushed against the fragment of material, the fragment of material turns inside out to form the pouch and enclose the ski mask.

19. The garment of claim 17 further comprising a pocket, wherein the pocket is a piece of material attached to one of the garment body portion and the hood

along a periphery of the pocket and wherein the pocket has an open top to receive the ski mask.

20. The garment of claim 19 wherein at least one of the garment, the head-and-face cover and the pocket is waterproof.
